

PART 1: DOWNLOAD THE CHOSEN SPECIES FROM THE PREVIOUS PHYLOGENETIC ANALYSIS ACTIVITY AND UPLOAD IT IN GALAXY FOR GENOME EXPLORATION

SPECIES: *Cynopterus brachyotis* (lesser short-nosed fruit bat) genome assembly (GCA_009793145.1)

GALAXY FILE NAME: 1: Cynopterus_brachyotis_genome_original.fna.gz

**NOTE: This is only a screenshot as I cannot upload the raw file on GitHub due to its large file size.
Therefore, this screenshot will serve as evidence that I indeed downloaded the raw genome.**

Properties

A screenshot of the Galaxy web interface. The top navigation bar shows 'Galaxy' and 'Using 2% of 268.4 GB'. The left sidebar contains navigation links like 'Activities', 'Tools', 'Workflows', and 'Workflows Invocations'. The main panel displays the details of an uploaded dataset named '1: Cynopterus_brachyotis_genome_original.fna.gz'. It shows '48,896 sequences' and a 'size' of '547.1 MB'. A warning message states 'This dataset is large and only the first 100 KB is shown below.' Below this, a preview of the FASTA sequence is visible. The right sidebar shows a 'History' list with various datasets, including 'Genome_Exploration_II_OBINET A_Cynopterus_brachyotis' and 'Cynopterus_brachyotis_Filtered_10kb'.
